Applicant: Katrina Schmidt

Serial No.: 10/644,450 Group Art Unit: 1711

IN THE CLAIMS:

Please amend the following claims having the same number as indicated:

1. (Currently Amended). A formulated resin component for use in a polyurethane

spray foam system to produce a polyurethane foam having a density of less than 1 pound

per cubic foot, said resin component comprising:

a blowing agent;

a first polyol having a number-average molecular weight of from 150 to

500 and having a hydroxyl number of from 250 to 1000 and having at least tetra-

functionality;

a second polyol having a number-average molecular weight of from 3500

to 8000 and having a hydroxyl number of from 20 to 100 and having terminal hydroxyl

groups; and

a curing component comprising a third polyol having at least one primary

amine group, a hydroxyl number of from 20 to 800, and a number-average molecular

weight of from 150 to 5000.

2. (Original). A resin component as set forth in claim 1 wherein said curing

component is present in an amount of from 2 to 15 parts by weight based on 100 parts by

weight of said resin component.

3. (Original). A resin component as set forth in claim 1 wherein said curing

component is present in an amount of from 5 to 12 parts by weight based on 100 parts by

weight of said resin component.

4. (Original). A resin component as set forth in claim 1 wherein said curing

component has a number-average molecular weight of from 250 to 2500.

2

H&H Docket No. 65,205-201

Applicant: Katrina Schmidt Serial No.: 10/644,450

Group Art Unit: 1711

5. (Cancelled).

6. (Original). A resin component as set forth in claim 1 wherein said curing

component has a hydroxyl number of from 30 to 450.

7. (Cancelled).

(Currently Amended). A resin component as set forth in claim 1 [[7]] wherein

said third polyol is further defined as a tri-functional polyol having three primary amine

groups.

8.

9. (Currently Amended). A resin component as set forth in claim 1 [[7]] wherein

said third polyol is further defined as a di-functional polyol having two primary amine

groups.

10. (Original). A resin component as set forth in claim 1 wherein said first polyol is

further defined as an amine-initiated polyol.

11. (Original). A resin component as set forth in claim 1 wherein said first polyol is

further defined as an aliphatic polyol.

12. (Original). A resin component as set forth in claim 1 wherein said first polyol is

present in an amount of from 5 to 25 parts by weight based on 100 parts by weight of said

resin component.

13. (Original). A resin component as set forth in claim 1 wherein said first polyol is

present in an amount of from 10 to 20 parts by weight based on 100 parts by weight of

said resin component.

14. (Original). A resin component as set forth in claim 1 wherein said first polyol

has a number-average molecular weight of from 250 to 550.

15. (Cancelled).

3

H&H Docket No. 65,205-201

Applicant: Katrina Schmidt

Serial No.: 10/644,450

**Group Art Unit: 1711** 

16. (Original). A resin component as set forth in claim 1 wherein said first polyol

has a hydroxyl number of from 400 to 825.

17. (Original). A resin component as set forth in claim 1 wherein said second

polyol is present in an amount of from 5 to 25 parts by weight based on 100 parts by

weight of said resin component.

18. (Original). A resin component as set forth in claim 1 wherein said second

polyol is present in an amount of from 10 to 20 parts by weight based on 100 parts by

weight of said resin component.

19. (Original). A resin component as set forth in claim 1 wherein said second

polyol has a number average molecular weight of from 4000 to 7500.

20. (Cancelled).

21. (Original). A resin component as set forth in claim 1 wherein said second

polyol has a hydroxyl number of from 20 to 60.

22. (Original). A resin component as set forth in claim 1 wherein said second

polyol is further defined as a triol.

23. (Original). A resin component as set forth in claim 1 wherein said second

polyol is further defined as a diol.

24. (Original). A resin component as set forth in claim 1 further comprising

additives selected from at least one of a catalyst, an emulsifier, a surfactant, and a flame

retardant.

25. (Original). A resin component as set forth in claim 1 wherein said blowing

agent is further defined as water and is present in an amount of from 15 to 40 parts by

weight based on 100 parts by weight of said resin component.

4

Group Art Unit: 1711

26. (Currently Amended). A polyurethane foam that is produced from a

polyurethane spraying system, is open-celled, and has a density of less than 1 pound per

cubic foot and low water absorption, said polyurethane foam being the reaction product

of:

a) a resin component comprising;

a blowing agent,

a first polyol having a number-average molecular weight of from 150 to

500 and having a hydroxyl number of from 250 to 1000 and having at least tetra-

functionality,

a second polyol having a number-average molecular weight of from 3500

to 8000 and having a hydroxyl number of from 20 to 100 and having terminal hydroxyl

groups, and

a curing component comprising a third polyol having at least one primary

amine group, a hydroxyl number of from 20 to 800, and having a number-average

molecular weight of from 150 to 5000, and

b) an isocyanate component comprising diphenylmethane diisocyanate;

wherein said a) and b) are reacted in a volumetric ratio having an isocyanate index

of from 15 to 70.

27. (Original). A polyurethane foam as set forth in claim 26 wherein said a) and b)

are reacted in a volumetric ratio having an isocyanate index of from 25 to 60.

28. (Original). A polyurethane foam as set forth in claim 26 wherein said

polyurethane foam has a water absorption of less than 10 percent by volume of said

polyurethane foam

Applicant: Katrina Schmidt

Serial No.: 10/644,450

Group Art Unit: 1711

29. (Original). A polyurethane foam as set forth in claim 26 wherein said

polyurethane foam has a water absorption of less than 5 percent by volume of said

polyurethane foam.

30. (Original). A polyurethane foam as set forth in claim 26 wherein said curing

component is used in an amount of from 2 to 15 parts by weight based on 100 parts by

weight of said resin component.

31. (Original). A polyurethane foam as set forth in claim 26 wherein said curing

component has a number average molecular weight of from 250 to 2500.

32. (Cancelled).

33. (Cancelled).

34. (Original). A polyurethane foam as set forth in claim 26 wherein said first

polyol is further defined as an aliphatic, amine-initiated polyol.

35. (Original). A polyurethane foam as set forth in claim 26 wherein said first

polyol is used in an amount of from 5 to 25 parts by weight based on 100 parts by weight

of said resin component.

36. (Original). A polyurethane foam as set forth in claim 26 wherein said second

polyol is used in an amount of from 5 to 25 parts by weight based on 100 parts by weight

of said resin component.

37. (Original). A polyurethane foam as set forth in claim 26 wherein said second

polyol is further defined as a triol.

38. (Original). A polyurethane foam as set forth in claim 26 wherein said second

polyol is further defined as a diol.

39. (Currently Amended). A method of forming a polyurethane foam from a

polyurethane spraying system, wherein the polyurethane foam has a density of less than 1

pound per cubic foot and low water absorption, said method comprising the steps of:

providing a) a resin component including a blowing agent, a first polyol having

a number-average molecular weight of from 150 to 500, having a hydroxyl number of

from 250 to 1000, and having at least tetra-functionality, a second polyol having a

number-average molecular weight of from 3500 to 8000, having a hydroxyl number of

from 20 to 100, and having terminal hydroxyl groups, and a curing component

comprising a third polyol having at least one primary amine group, a hydroxyl number of

from 20 to 800, and having a number-average molecular weight of from 150 to 5000,

providing b) an isocyanate component comprising diphenylmethane

diisocyanate; and

reacting a) and b) in a volumetric ratio of from 1:1.2 to 1:5 such that a) and b)

are reacted having an isocyanate index of from 15 to 70.

40. (Original). A method as set forth in claim 39 wherein said step of reacting a)

and b) is further defined as reacting a) and b) in a volumetric ratio of from 1:1.2 to 1:2

such that a) and b) are reacted having an isocyanate index of from 25 to 60.

41. (Original). A method as set forth in claim 39 wherein the step of reacting a) and

b) is further defined as spraying a) and b).

42. (Original). A method as set forth in claim 41 wherein the step of spraying a)

and b) is further defined as mixing a) and b) through a nozzle of a spray gun.

43. (Original). A method as set forth in claim 39 wherein the curing component is

provided present in an amount of from 2 to 15 parts by weight based on 100 parts by

weight of said resin component.

7

Applicant: Katrina Schmidt Serial No.: 10/644,450 Group Art Unit: 1711

- 44. (Original). A method as set forth in claim 39 wherein the curing component has a number average molecular weight of from 250 to 2500.
  - 45. (Cancelled).
  - 46. (Cancelled).
